

# How to Accept Bitcoin in WordPress/WooCommerce?

1

## Deploy a server

Choose one of many deployment methods and install your BTCPay. From 1-click web-deployment for newbies to hardware installation for advanced users.

2

## Install Plugin

Download BTCPay WooCommerce plugin from WordPress Repository or GitHub. Upload and activate.

3

## Pair with a store

WooCommerce > Settings > Payments. Click BTCPay. Fill out the server URL and request pairing. Approve the pairing of your store and payment processor.

4

## Connect wallet

Create a store inside BTCPay and add public key to your wallet. Receive payment directly, no third party, no fees. You are your own bank.

5

## Test it out

Make sure to test the checkout process before going live.
